WO 2004/101301 A1

(57) Abstract: The invention relates to an air distributor device (1) comprising an air conduction housing (2) and a displaceable flap (6) that is located in the air conduction housing (2). Said air conduction housing is equipped with an air inlet (3) and at least two air outlets (4, 5), which can be completely and/or partially sealed by the flap (6). The invention also relates to an air mixing device that is configured in a corresponding manner.
